THE RESPONSES TO THIS QUESTIONNAIRE WILL BE MADE
AVAILABLE TO THE PUBLIC

NAME OF THE ORGANISATION	VERN e.V. (Verein zur Erhaltung und Rekultivierung von Nutzpflanzen in Brandenburg)
STAKEHOLDER	Competent Authority (CA) involved in S&PM certification and
GROUP	control
	Competent Authority (CA) involved in S&PM variety and material
	registration
	Breeder of S&PM
	Supplier of S&PM
	User of S&PM
	Professional user of raw material produced by agriculture,
	horticulture or forestry
	Consumer Consumer
	☑ Other, please specify:
	The Verein zur Erhaltung und Rekultivierung von Nutzpflanzen in Brandenburg (VERN) e.V. is a non-profit NGO that safeguards seeds of old varieties, reproduces seeds of old, underutilized, neglected and non-registered varieties, exchanges seeds and gives them away on a non-commercial basis as niche supplier. VERN e. V. maintains a collection of old varieties which originates

	from gene bank accessions (IPK Gatersleben) and other sources to make seeds available to home and hobby gardeners as well as subsistence farmers. Further, VERN e. V. supports local small scale gardeners and farmers in their on-farm conservation activities. VERN e. V. is also involved in the regional "Kulturlandschaftsprogramm" (KULAP, derived from EC-reg. ELER, agroenvironmental measures) of the federal state government Brandenburg, a programme that aims to promote agrobiodiversity and to boost the cultivation and use of old varieties in the region of the federal state of Brandenburg, Germany. VERN e. V. is an important national player, maintaining plant genetic resources of old varieties in Germany, seeking to maintain crop genetic resources (CGR) as a biological as well as a cultural heritage. SME company Company operating on national level International company Toganisation operating on national level International organisation
COUNTRY	Germany

1. General questions

1.1 Are the problems	defined correctly in the context of So	&PM marketing?
Yes	No 🖾	
1.2 Have certain prol	olems been overlooked?	
Yes 🖾	No 🗌	
If yes, which –		
1) in situ and on farr	n conservation of plant genetic reso	ources,
2) the guaranty of a	'zero tolerance" policy related to GI	MOs.

conservation of plant genetic resources (e.g. heirloom varieties, old varieties, etc.) as well as related use of to neglected and underutilized varieties, including efforts to bring them back to the supply chain, have to be clearly delimited from the formal seed market. This is essential in order to harmonise the S&PM legislation with the requirements of the Convention on Biological Diversity (CBD) and other multilateral agreements, i.e. under the FAO.

The framework of the S&PM legislation needs a clear definition. The aim is to regulate the formal seed market, focusing interests and safety for modern, big and specialized farmers and horticulturalists. However, the non-commercial activities of NGOs, of seed initiatives, users of collections, niche suppliers and seed-exchanging-markets have to be excluded from the seed legislation. Heirloom, conservation varieties and old (non registered varieties) without economic potential or with restricted value reserved for informal and niche markets have to be excluded from official and technical bureaucratic regulation. This is mandatory to promote agrobiodiversity in the sake of the CBD and other multilateral agreements, for instance under the FAO.

The economic value of the "seed market" of heirloom and old varieties is marginal as compared to the formal seed market of large scale commercial breeders and seed suppliers. Mostly, the conservation of old varieties is a non-profit activity of seed initiatives, NGOs and volunteers. If producing and selling seeds of old and non-registered varieties in small amounts would obey the regulations the S&PM legislation, most of the *in-situ/on-farm* activities have to be given up. Seed initiatives, NGOs and other volunteers do not have the financial or staff capacities to meet the standards of the regulation. Consequently, this would set-back the promotion of agrobiodiversity as well as endanger future breeding options in the face of i.e. climate change and deeply disregard the requirements of the CBD and the International Seed Treaty under FAO (ITPGR).

2) Conservation varieties (as well as other varieties) are under constant threat of contamination with genetically modified seeds. This is being triggered and reinforced by industrial dissemination of gm-seeds and gm-material as well as by experimental research. Any legislation with regard to seed and plant varieties has to provide for a "zero tolerance" policy in order to keep these assets of humankind free from any contamination of this kind.

1.3 Are certain problems u	nderestimated or over	·ly empha	sized?		
Rightly estimated	Underestimated	図	Overestimated		
Which ones: _					
the potential loss of heirloom an old varieties and the danger of reduced availability - see comment above

Question 2:

2.1 Are the objectives	s defined correctly in the co	ontext of S&PM marketing?
Yes	No 🗵	
2.2 Have certain obje	ectives been overlooked?	
Yes 🖾	No	
If yes, which ones:		
, ,	sensical to include heirl	servation varieties are extremely loom varieties into the context of

The recast of the S&PM legislation has to be harmonised with the requirements of the CBD and the ITPGR. Therefore we demand the exclusion of conservation and non-registered varieties from the proposed seed legislation. We demand the right to produce seeds of non-registered varieties to exchange and sell the seeds on a non-industrial commercial level of niche suppliers. The work of seed initiatives and the like guarantees on one hand the choice and access to a wide diversity of plant species and plant varieties for home and hobby gardeners as well as for subsistence farming. On the other hand we are safeguarding material for future adaption and research and development (R&D), for instance in face of climate change.

We disagree with the opinion of EU-DG in Scenario 4 that the marketing of conservation varieties is being liberalised (Scenario 4/4., page 13). The Commission Directive 2009/145/EC of 26 November 2009 does not reduce substantially the administrative burden. Consequently, the administrative burden of this registration plus the burden of registration fees (even reduced fees) are unsustainable for seed initiatives, NGOs and other volunteers who are not active in the industrial commercial seed sector. Seed production plots of most of the old and neglected varieties are very small (about 10 m² per variety or even smaller). It does not make any sense to carry out the registration of a huge number of old varieties conserved in such small quantities. Further, only small portions of seed are given away for the use of home and hobby gardeners. Thus, we demand to exclude this non-commercial and small scale commercial seed sector of conservation varieties from the S&PM legislation.

We absolutely dissent with the assertion of EU-DG, that conservation varieties would have necessarily "a strong link with their region of origin" (Scenario 4/4., page 14). This contradicts any historical experience. Dispersal and trade of seeds was and is not limited regionally. This is particularly true for food crops like grains and vegetables in Central Europe. If the contribution of conservation varieties is restricted to their region of origin this will reduce the number of their potential cultivators and users. Consequently, the potential population sizes of such conservation varieties will be arbitrarily reduced and their genetic development will be dangerously constricted. Thus, the proposed S&PM legislation would impair biodiversity, specifically agro-biodiversity.

Yes 🔲	No 🖾
If yes, which ones:	
2.4 If there is a need to pones? Please rank (1 to 5	prioritise the objectives, which should be the most important, 1 being first priority)
1 ☐ ensure availability o	f healthy high quality seed and propagating material;
5 secure the functioning	ng of the internal market for seed and propagating materia
$4 \square$ empower users by in	nforming them about seed and propagating material;

5.2 Which scenario or combination of scenarios would best meet the objectives of the review of the legislation? Please justify. Scenario 1 □ Scenario 2 □ Scenario 3 □ Scenario 4 ☒ Scenario 5 □ Other scenario □ If other please describe the main elements of that scenario: Scenario 4 potentially allows the development of freedom of action for the use of underutilized species and varieties. 5.3 Is it possible to have a regime whereby a variety is considered as being automatically registered in an EU catalogue as soon as a variety protection title is granted by CPVO? Yes □ No □ 5.4 Other suggestions and remarks: This point does not meet our needs as a seed initiative.							
Type of impact	Not relevant	Very beneficial	Fairly beneficial	Neutral	Not very beneficial	Not at all beneficial	Don't know
Scenario 1: Cost recovery						×	
Scenario 2: Co- system						X	
Scenario 3:Reduced burden Co-system					図		
Scenario 4: Enhanced flexibility					図		
Scenario 5: Centralistion						X	
3. Written comments on the S&PM review We do miss an acknowledgement and adequate empowerment of seed initiatives. We strongly recommend to relate any draft legislation on seeds and propagating material to the requirements of CBD and ITPGR, and to include a strong protection from gm-contamination (be it adventitious or not). The last point is of particular relevance as the EU seed industry heavily depends on imports of reproduced seeds from third countries, and exports to third countries.
